High Tech rugs produced with Aquatech

Designed by CRS Paola Lenti

The *Sevan* rug is produced with Aquatech yarns and the hand tufting technique. The texture is created with dense and regular *bouclé* stitches tufted to the cotton and polyester backing. The linear pattern which decorates the rug is created with *bouclé* stitches which are thinner and

lower compared to the rug surface and is repeated lengthwise every 50 cm. Only one colour can be chosen. The tufting density makes the use of the *Sevan* rug unsuitable in areas with very high humidity or frequent rain.
